## **AUTOMATIC TOKEN MULTI SENDER**

**POWERED BY ZIPTOS**

SEND TOKENS TO THOUSANDS OF  
WALLETS WITH A FEW CLICKS

# WHY ZIPTOS TOKEN SENDER

## OPPORTUNITY

### Manual

We found out that the currently the only way to airdrop tokens is either via writing a script, or one by one. Both resulting in inefficient use of time, effort and money (after all time is money). Can't put price on time these days now, can we?

### Errors?

Manual process is prone to human error, typos and most of all, tedious effort to even try to identify the issue and resolve it. By the time its resolved, an opportunity to get community/holders is lost.

### The need

We strongly believe acting on the opportunity to uplift the ecosystem is the biggest contribution an initiative can make. We identified that Aptos projects are incentivising communities with tokens and hence need an automated, easy to use, sophisticated and readily available tool - hence Ziptos multi token sender. It solves all the challenges and most of all - SAVES TIME!

### EASE OF USE

Since it is telegram based, the ease of access is 100 times more compared to opening a web-page or a specific app, entering password etc. Telegram is a self custody utility app and we leveraged that to make this available at the click of a button. Our FAQ section has answers to almost all commonly asked questions as self help, including how to create a CSV file :-)

### SWIFT, FAST AND SECURE

We optimise gas within the network automatically within the bot, which means if network is congested, gas price will auto adjust to ensure tokens are sent quickly, so you don't lose out on opportunities to grab holders. It is secure as the only person to access is YOU! Upload a CSV file with standard format and send tokens to 100s of wallets within few minutes (depending on how busy network is etc.)

### RELIABILITY

With 24\*7 support and expertise in skills, our agent will be always up and running, we will keep improving the service based on usage, community feedback and additional requirements (such as user report, failed transaction report and workarounds etc.) With us, you will never need to code and feel lost or slowed down. That's Ziptos, aiming to be lightning fast.

## ABOUT TOKEN SENDER

Fully automatic multi wallet token sender is built on MOVE tech on Aptos chain, using smart bot capabilities on telegram. With our smart agent, anyone can send any number of tokens to numerous wallets with a few clicks, fully automated, by either manually entering wallet address or uploading CSV file
